RE: Lt Wt Cast Stone

To whom it may concern,

I would like to write this letter of recommendation for the use of Piazza Stonework's light weight cast stone design. As a Masonry Contactor product such as this creates excitement for our industry. This system competes with large Traditional Cast Stone/GFRC cornice details. It gives the durability of stone while minimizing the bearing weight of each piece. The shop drawings were excellent which helped the learning curve in the field. Our field crew really enjoyed the adjustability and the minimal weight of each piece. It simply made the project more enjoyable. We are looking forward to our next opportunity.

Please feel free to reach out if you have any further questions.

Respectfully,

Kent Bounds
