Re: Liberty Continuing Care Retirement Community (CCRC) Lightweight Stone
Cornice

Mr. Pursley,

I would like to offer sincere thanks and commend the incredible, and flexible, Piazza team for your performance on the Liberty Continuing Care Retirement Community (CCRC) project. Through the aid in design, working through budget exercises, outstanding execution to install a quality product, the attention to detail to remain safe around other trades, and the effort involved to meet an ever demanding schedule, you exceeded our expectations at every step. Your instrumental involvement with the buildings' façade provided a product that we are very proud of and will show to our children and grandchildren.

The effort put forward to help the design team work through their design details while working within budget constraints did not go unnoticed. Throughout the design process, the design team considered lightweight stone, GFRC, and GFRP cornice materials before selecting your lightweight stone. It was clear that your product offered a highend appearance and a monetary savings over the other cornice systems considered by eliminating the need for backup metal framing.

We appreciate your team tremendously and look forward to future projects together.

Sincerely,

CHOATE CONSTRUCTION COMPANY
