Subject: Medical College of Georgia
Reference: Lightweight Cast Stone Specifications for Administration Building and Annex Building, 2nd
Floor HVAC Renovation

Dear Brundy;

Our decision to use Piazza Cast Stone and Piazza Plaster on the projects mentioned above was not only the right decision, but the end result exceeded our expectations, and the client is well satisfied.

Thank you for your attention to the aesthetic details. We look forward to specifying Piazza Stone on future projects.

Sincerely,

David B. Harley, AIA

Piazza Stoneworks

Re: Renovations to the Administration Building for the Medical College of Georgia

We designed the new porch addition for the above project around Piazza Cast Stone. The client requested the new porch match the original 1950's existing front porch. This porch was built of brick and decorative cast stone.

We selected the Piazza stone because it could be manufactured to match the original in profile, color and texture. The quality was identical to cast stone, but cost significantly less due to the foam core. Additional savings were realized due to the lighter weight, which allowed for small steel beams and columns. The lighter weight also speeds installation time.

This is a product we look forward to using again when the need arises.

Sincerely,

David B. Harley, AIA
