To Whom It May Concern,

Re: Piazza Stone Finish

Studio 3 Design Group, P.C. has recently completed two office buildings in Augusta, Georgia designed with Piazza Stone finish. The product provided our firm and the owner with a very successful and attractive building.

We look forward to specifying Piazza Stone on future products and recommend your consideration of Piazza Stone as an alternate to EIFS or cast stone.

Sincerely,

James I Webb AIA
Vice President

Re: Piazza Stone Finish

Studio 3 Design Group, P.C. has just recently completed a four story \$4.5 million dollar bank in the Augusta, Georgia area which was originally designed with brick and cast stone. Due to budget constraints, Piazza Stone was submitted as an alternate to the cast stone and was chosen for the final product. The end result provided the owner with a very successful and attractive building which not only met the needs of the budget but also provided an exterior finish that gave the results above and beyond our anticipations and exceeded that of which we felt we would get with cast stone due to the quality control that was available with the Piazza Stone finish hence no chips or cracks or uneven stained material.

We are currently working on a new office building in which we are choosing Piazza Stone over cast stone for the reasons stated above and would highly recommend you consider this material for your next project. We are confident that you will find this material will give you the look and durability that you are looking for in your project.

Sincerely,

Richard B. Hinman, Jr.
President

Re: Piazza Stone Finish

Studio 3 Design Group, P.C. has just recently completed a new athletic facility for Augusta Preparatory Day School in Martinez, Georgia. The project included the Piazza Stone product as a cornice wrapping the facility and for two colonnaded entrances. The Piazza Stone provided the owner with a very attractive building which not only met the budgetary needs, but also provided an exterior finish that gave the same results that we felt we would have gotten with more expensive cast stone.

We are confident that you will find this material to provide the look and durability that you are looking for in your project.

Sincerely,

Samuel D. Beaird, Jr.
